EXPERIENCE

POKÉMON API REBUILD | PROJECT

I was assigned the task of modernizing a static website originally built using vanilla HTML, CSS, and basic JavaScript. The goal was to enhance scalability, maintainability, and performance by rebuilding the entire site from scratch using **Next.js**, a powerful React-based framework. Weather app rebuild | Project Similarly to the Pokémon rebuild I had built the same project in Vanilla Html and rebuilt it in Next.js from scratch

WEATHER APP REBUILD | PROJECT

Similar to my earlier *Pokémon Rebuild* project—I was tasked with rebuilding a previously developed weather application originally written in **vanilla HTML, CSS, and JavaScript**. The goal was to reimplement the project using a modern framework (Next.js), improve user experience, and make the codebase scalable and maintainable.

ITINERA.IO | PROJECT

I was responsible for developing the frontend of the project, which involved creating a responsive and intuitive navigation system, building key user interface components, and ensuring the entire website was optimized for performance across devices. I focused on translating design requirements into clean, maintainable code using modern frontend technologies, contributing significantly to the overall user experience and functionality of the application.

CODESTACK | INTERNSHIP

Stockton, CA, 2025 – Present

Working on various projects including the Williams Act website which allows workers for the county's education system ensure schools are up to code and safe and sound for the kids to learn and excel in

SKILLS

- HTML
- CSS
- JavaScript
- C#
- Azure
- JSON
- TypeScript
- React
- SQL
- React Native
- Next.js
- Node.js
- Tailwind CSS
- Boot Strap

EDUCATION

CODESTACK ACADEMY | 2024-2025

I learned how to code and create websites from scratch, and I gained the necessary skills required to work as a Software Engineer

LATHROP HIGH SCHOOL | 2020-2024

I gained my High School diploma
